Assignment No. 3

Aim: Descriptive Statistics - Measures of Central Tendency and variability Perform the following operations on any open source dataset (e.g., data.csv).

- 1. Provide summary statistics (mean, median, minimum, maximum, standard deviation) for a dataset (age, income etc.) with numeric variables grouped by one of the qualitative (categorical) variable. For example, if your categorical variable is age groups and quantitative variable is income, then provide summary statistics of income grouped by the age groups. Create a list that contains a numeric value for each response to the categorical variable.
- 2. Write a Python program to display some basic statistical details like percentile, mean, standard deviation etc. of the species of 'Iris-setosa', 'Iris-versicolor' and 'Iris-versicolor' of iris.csv dataset.

Provide the codes with outputs and explain everything that you do in this step.

Code:

```
[1]: import pandas as pd

df1 = pd.read_csv("Customers.csv")
    df1
```

[1]:	CustomerID	Genre	Age	<pre>Annual_income_(k\$)</pre>	Spending_score
0	37	male	53	102	20
1	25	male	42	94	92
2	36	male	52	124	30
3	16	male	29	27	25
4	184	male	47	118	18
	•••			•••	•••
194	37	male	22	33	16
195	75	male	30	82	71
196	18	male	39	85	86
197	183	female	78	130	30
198	129	female	52	50	75

[199 rows x 5 columns]

```
